Some of the results were surprising. Take the survey yourself and find out what type of investor you are.](https://www.linkedin.com/shareArticle?mini=true&url=https%3a%2f%2fwww.abglobal.com%2fdefined-contribution%2fus%2finside-the-minds-of-plan-participant.htm&title=I%20took%20AB%27s%20Investor%20Survey%20and%20found%20out%20I%20am%20a%20CAPABLE%2C%20CONFIDENT%20INVESTOR&summary=AB%20queried%20over%201%2C000%20US%20workers%20to%20help%20understand%20their%20behavior%20and%20attitude%20toward%20investing%20for%20retirement%20Some%20of%20the%20results%20were%20surprising%20Take%20the%20survey%20yourself%20and%20find%20out%20what%20type%20of%20investor%20you%20are%3a)

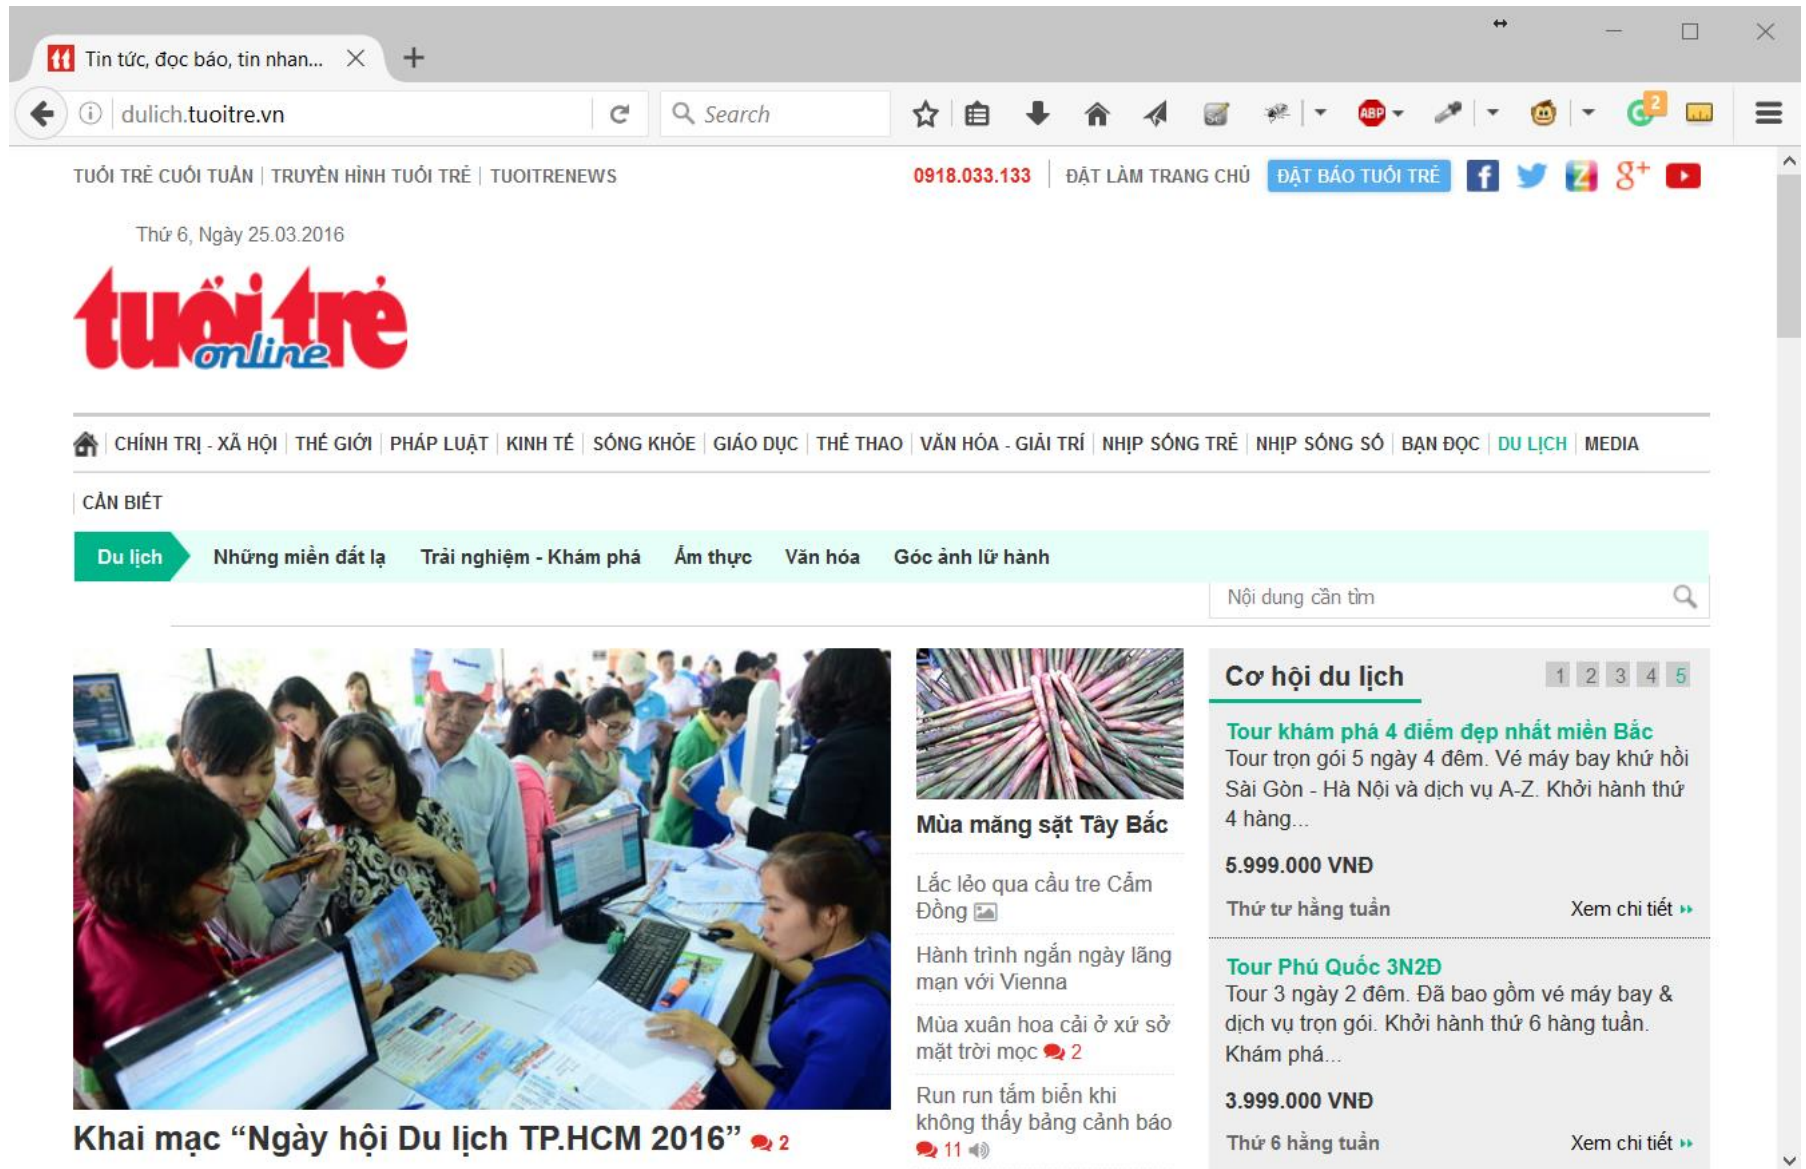

**WHAT IS THE DIFFERENCE
BETWEEN THESE BROWSERS?**

BROWSER ARCHITECTURE

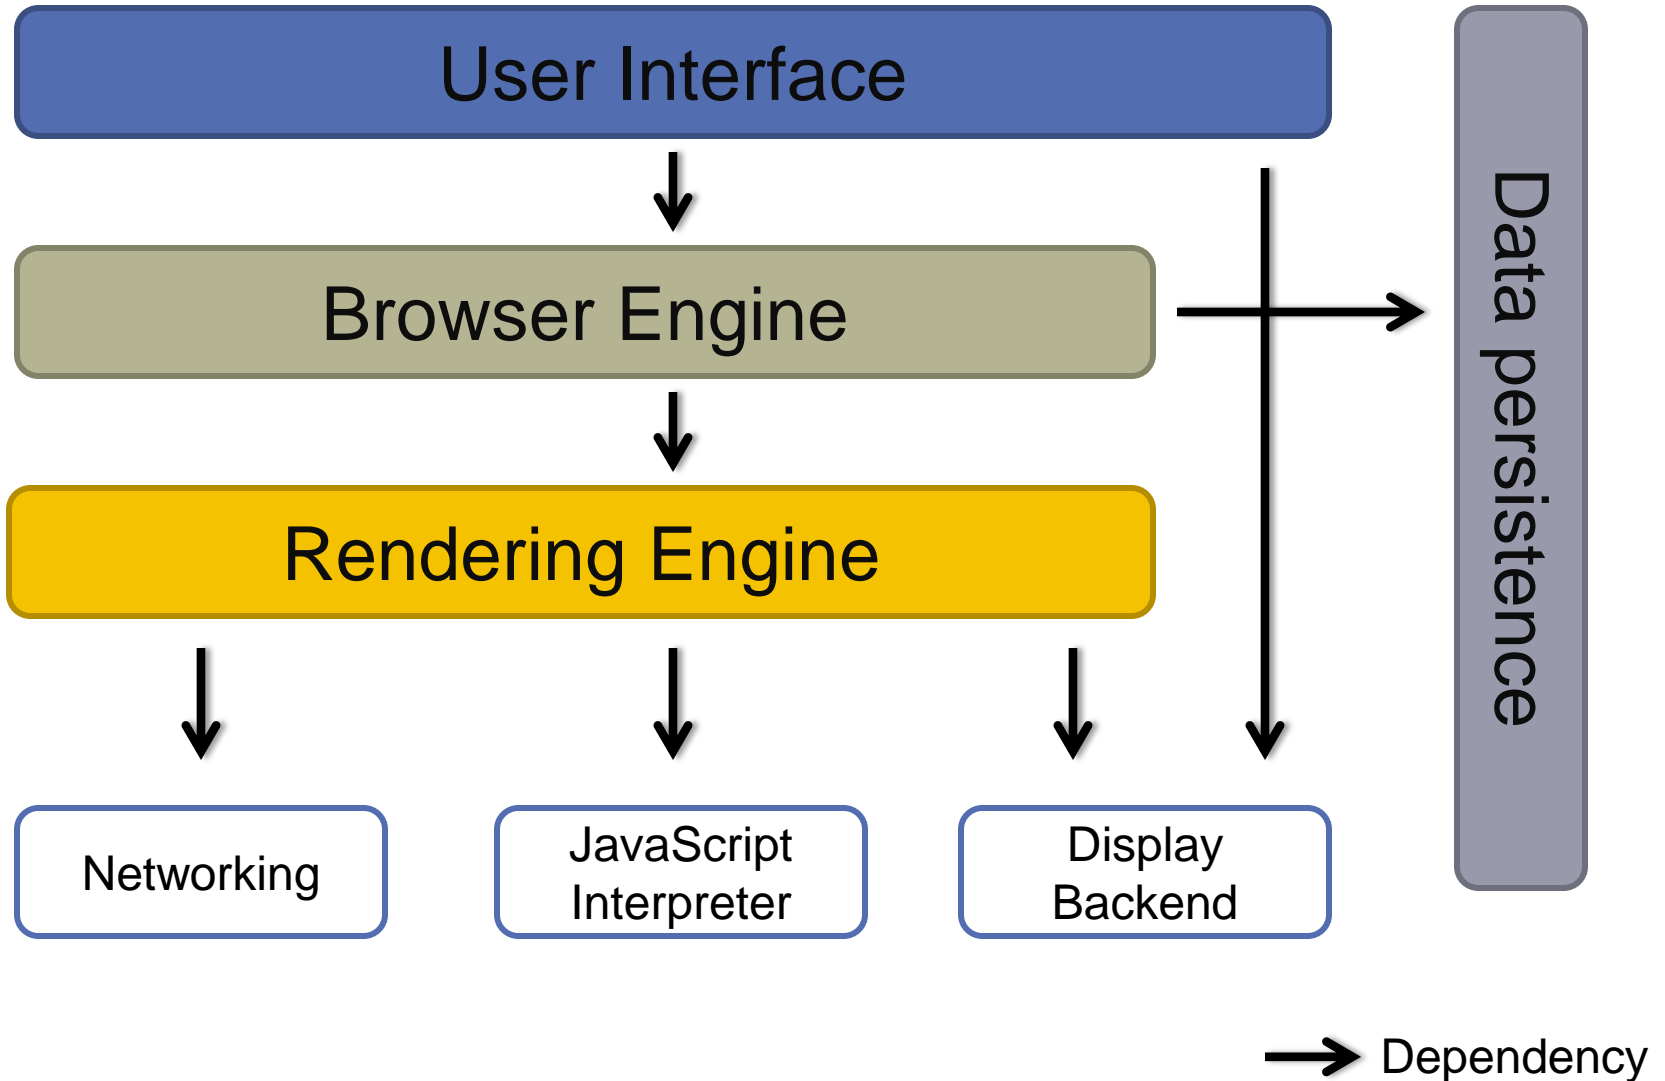

WHAT'S THE BROWSER?

The browser main functionality is to present the web resource you choose, by requesting it from the server and displaying it on the browser window. The resource format is usually HTML but also PDF, image and more.

WHAT'S THE BROWSER?

BROWSER ARCHITECTURE

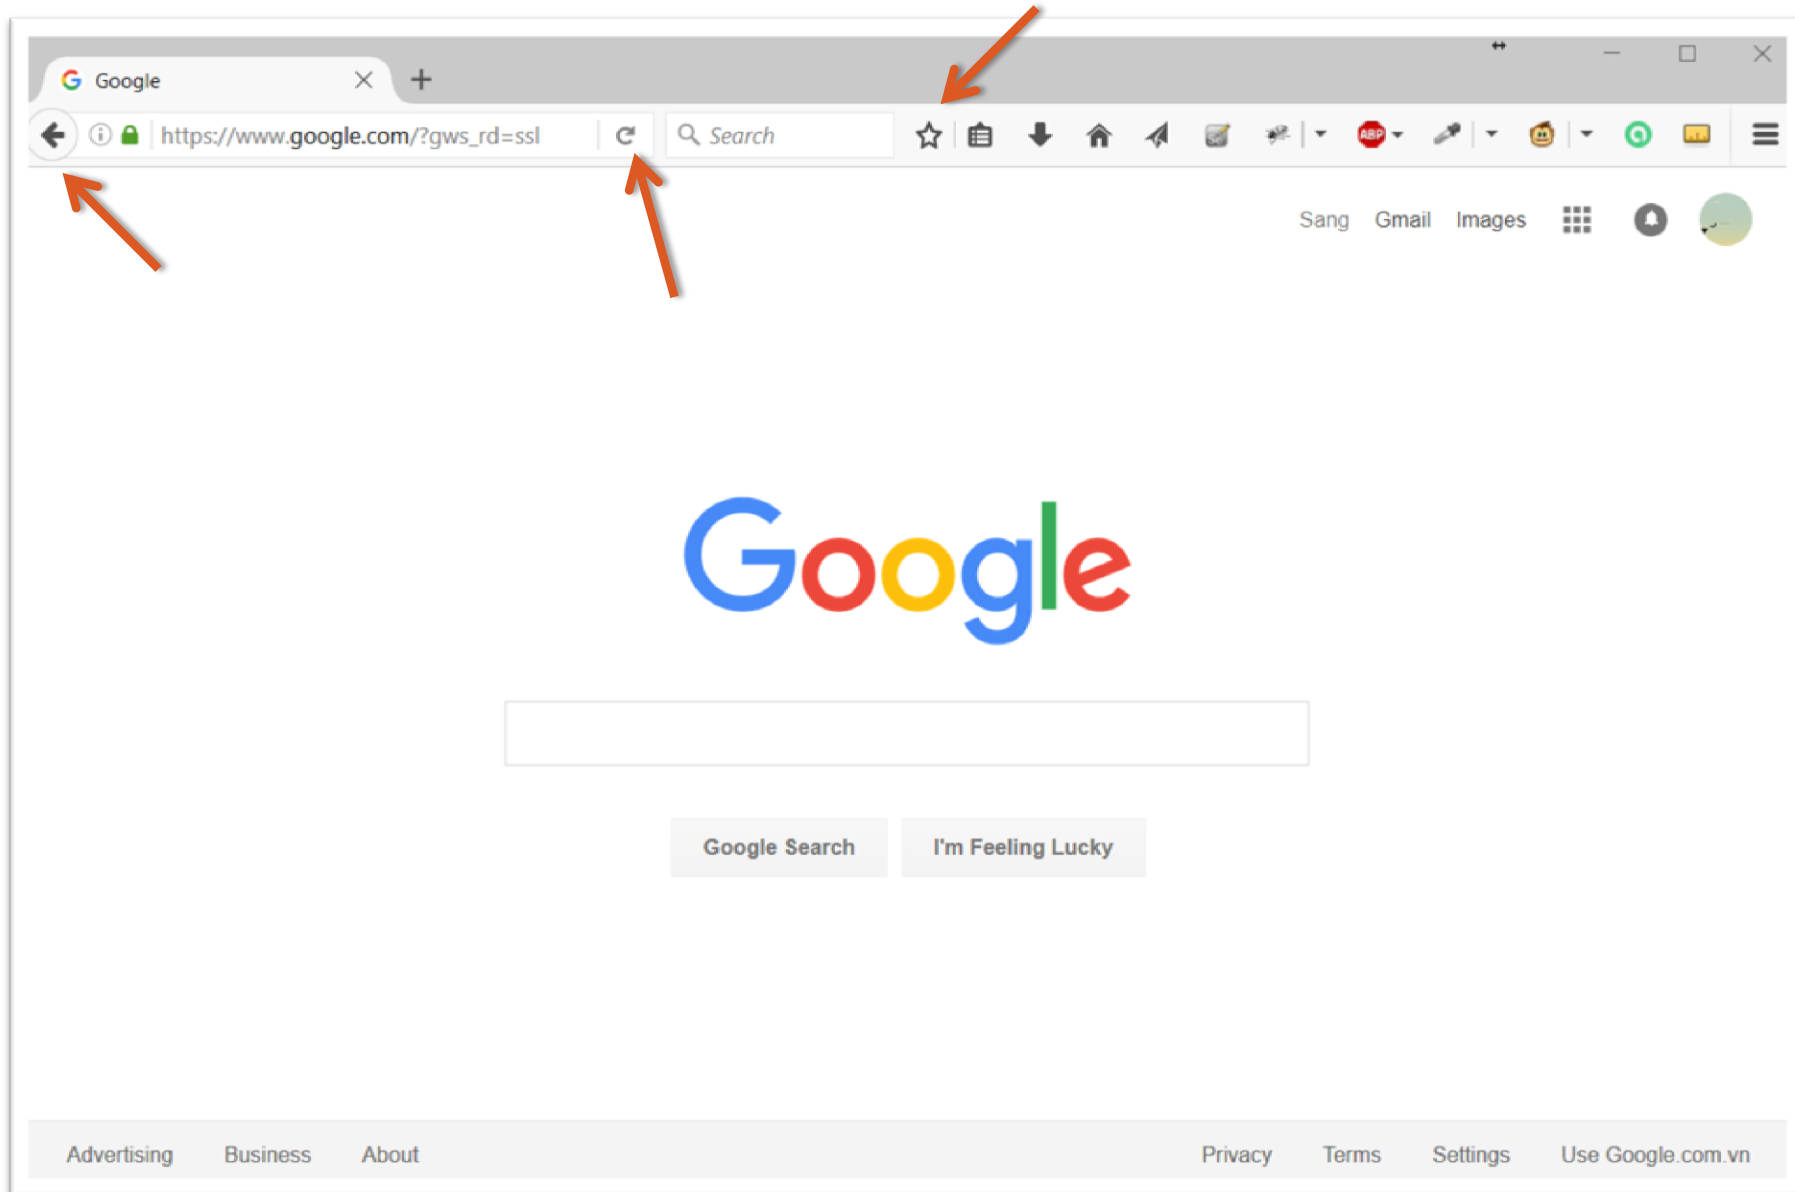

USER INTERFACE

The space where interaction between users and the browser.

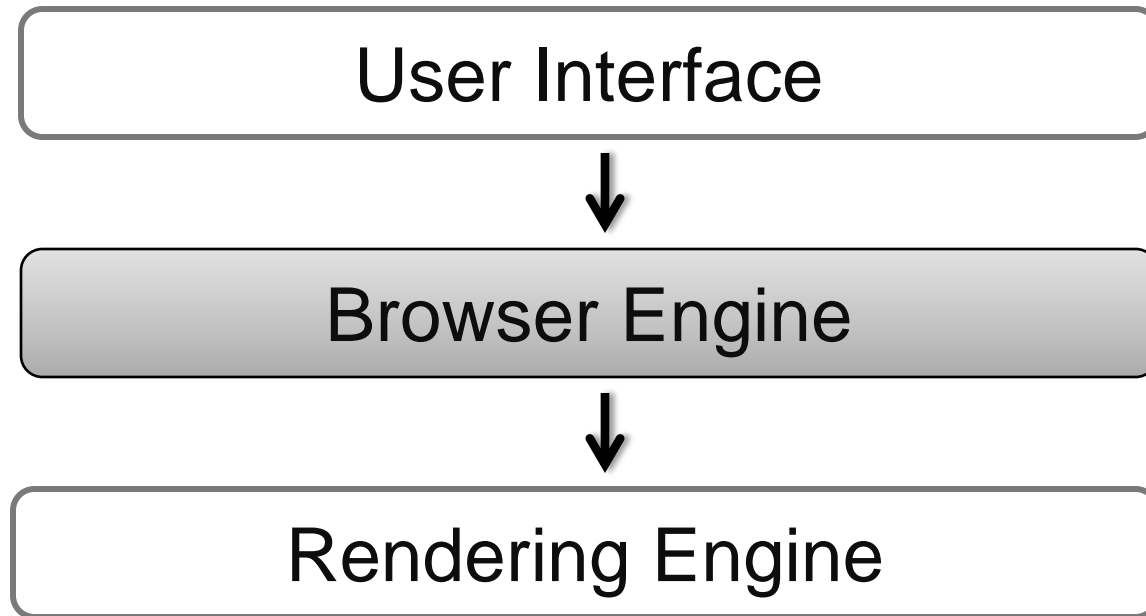

Most of the browsers have common inputs for user interface:

- Address bar.
- Next and back buttons.
- Buttons for home, refresh and stop
- Bookmark web pages
- ...etc.

BROWSER ENGINE

The bridge between
User Interface & Rendering Engine

BROWSER ENGINE

Browser Engine provides methods to begin the loading of URL and other high-level browsing actions.

- Reload, Back, Forward actions**
- Error messages**
- Loading progress**

RENDERING ENGINE

Rendering Engine interprets (render) the HTML, XML, JavaScript and generates the layout that is displayed in the User Interface.

Key component of this phase is HTML, CSS parse.

This is a reasons why the browser display a website so difference.

NETWORKING

Access and transfer data on the internet (calls HTTP, HTTPS, FTP).

The Networking components handles all aspects of internet communication or security.

JAVASCRIPT INTERPRETER

Component parse & executes the JavaScript that is embedded in the website.

Results of the execution are passed to the Rendering Engines for display.

DISPLAY BACKEND

Display common UI components.

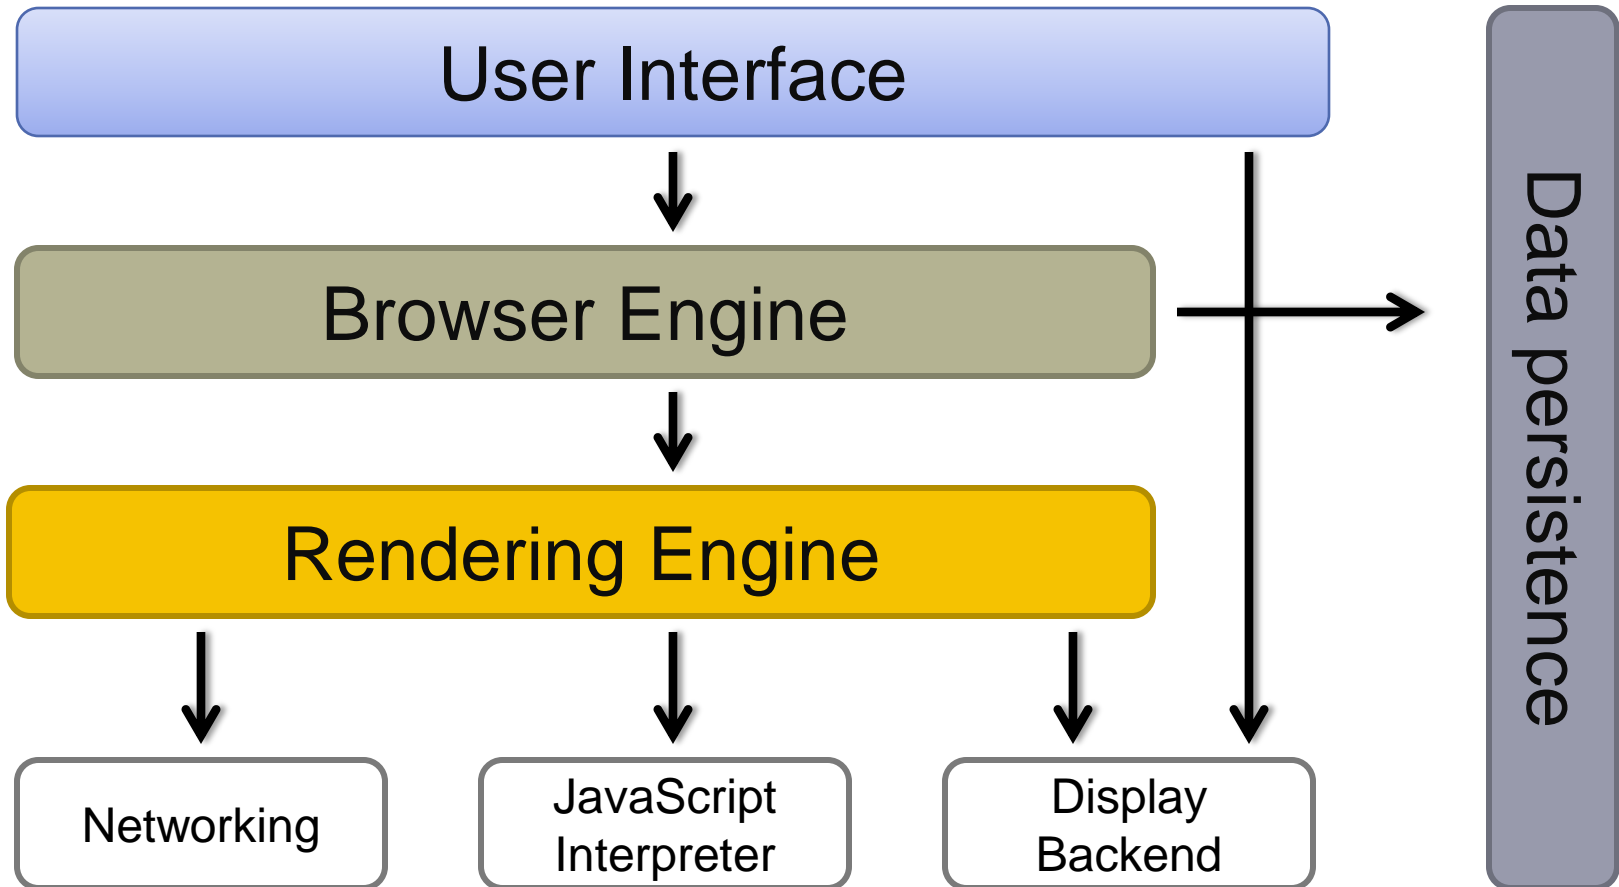

Drawing basic widgets like combo boxes, windows.

DATA PERSISTENCE

Storing the data on the client side.

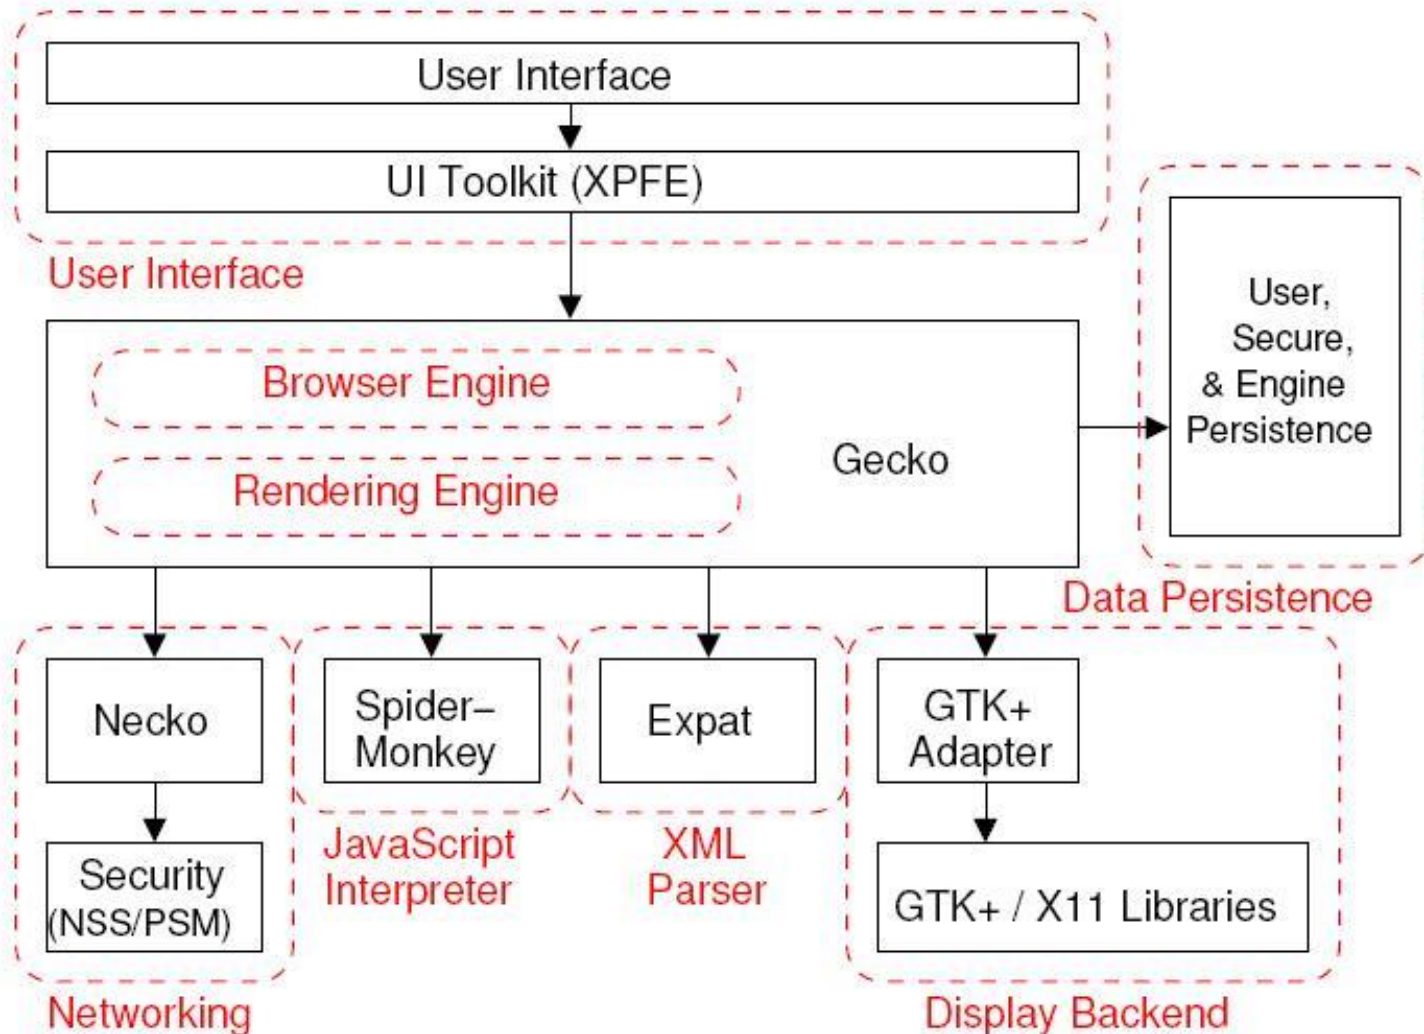

- Cookies.**
- Cache.**

LOOK BACK AGAIN!

→ Dependency

FIREFOX ARCHITECTURE

CHROME'S ARCHITECTURE

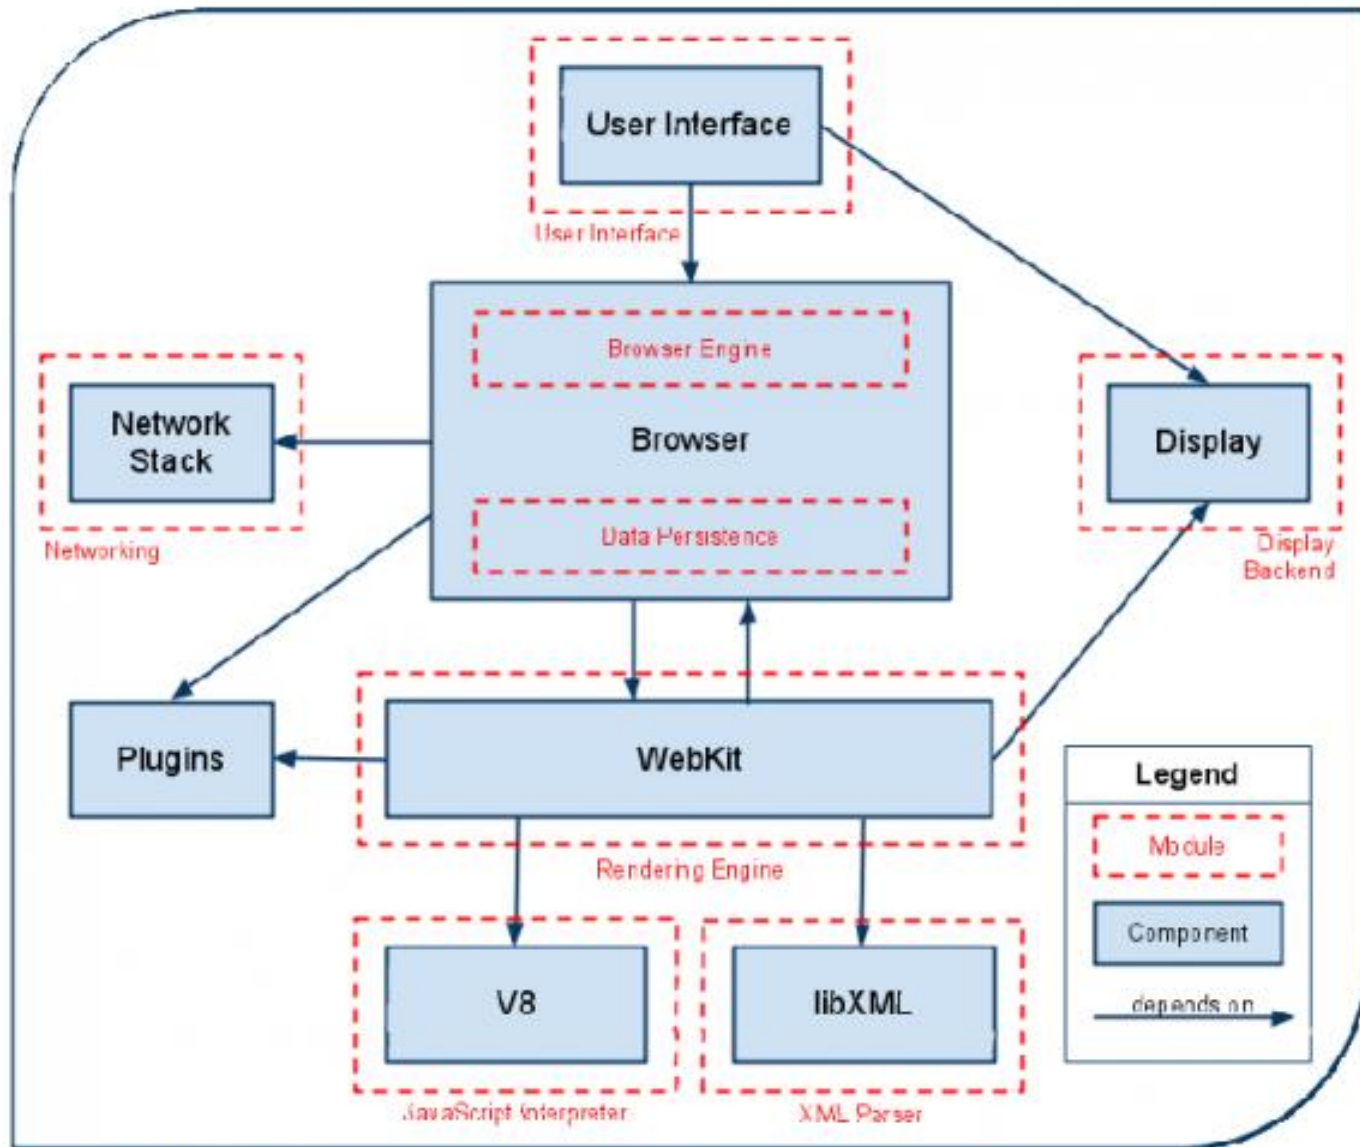

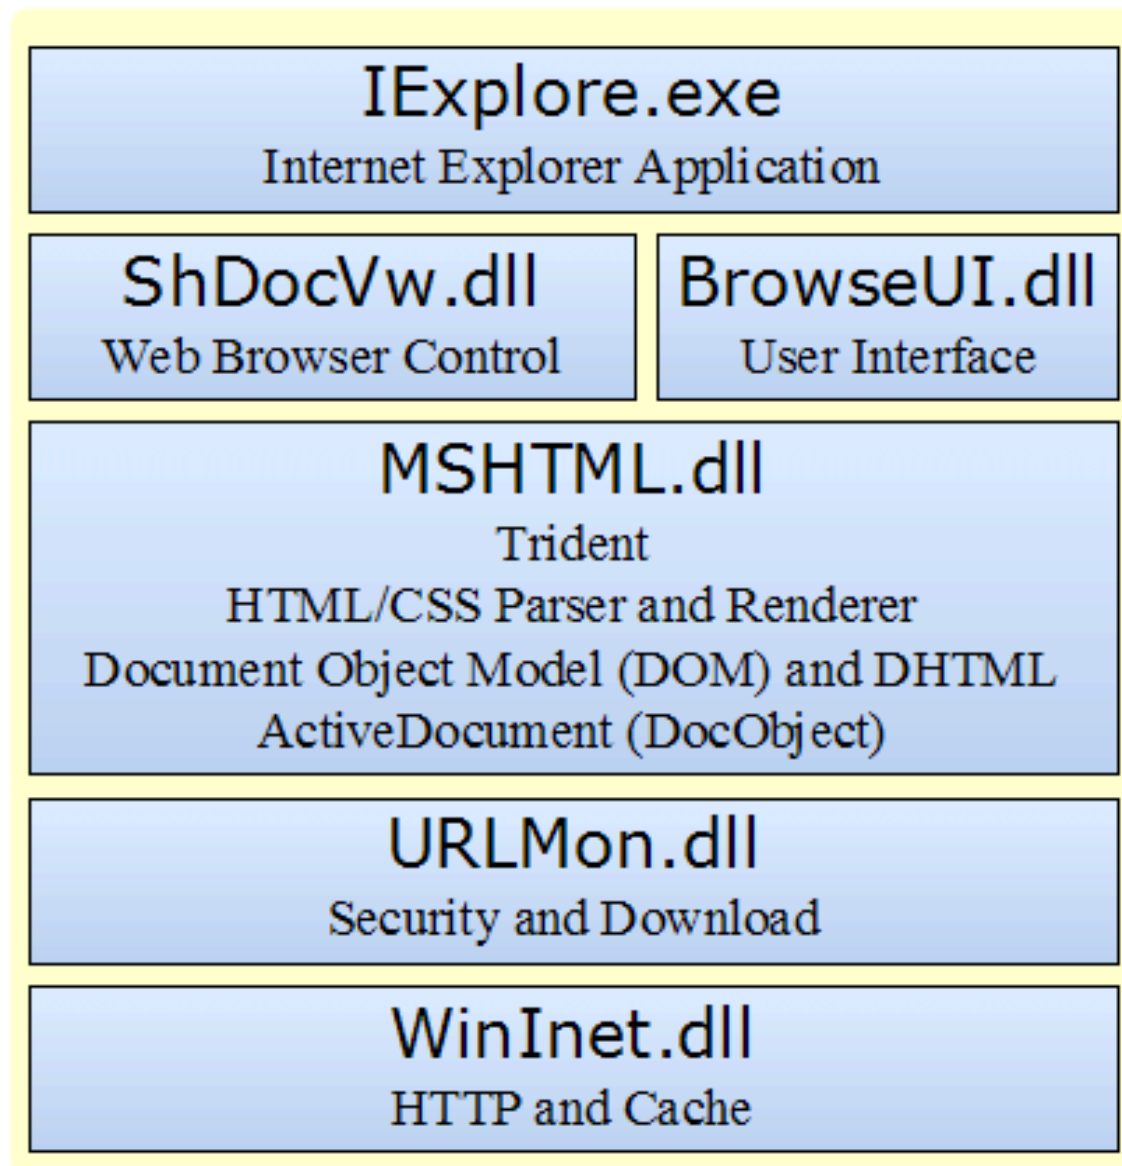

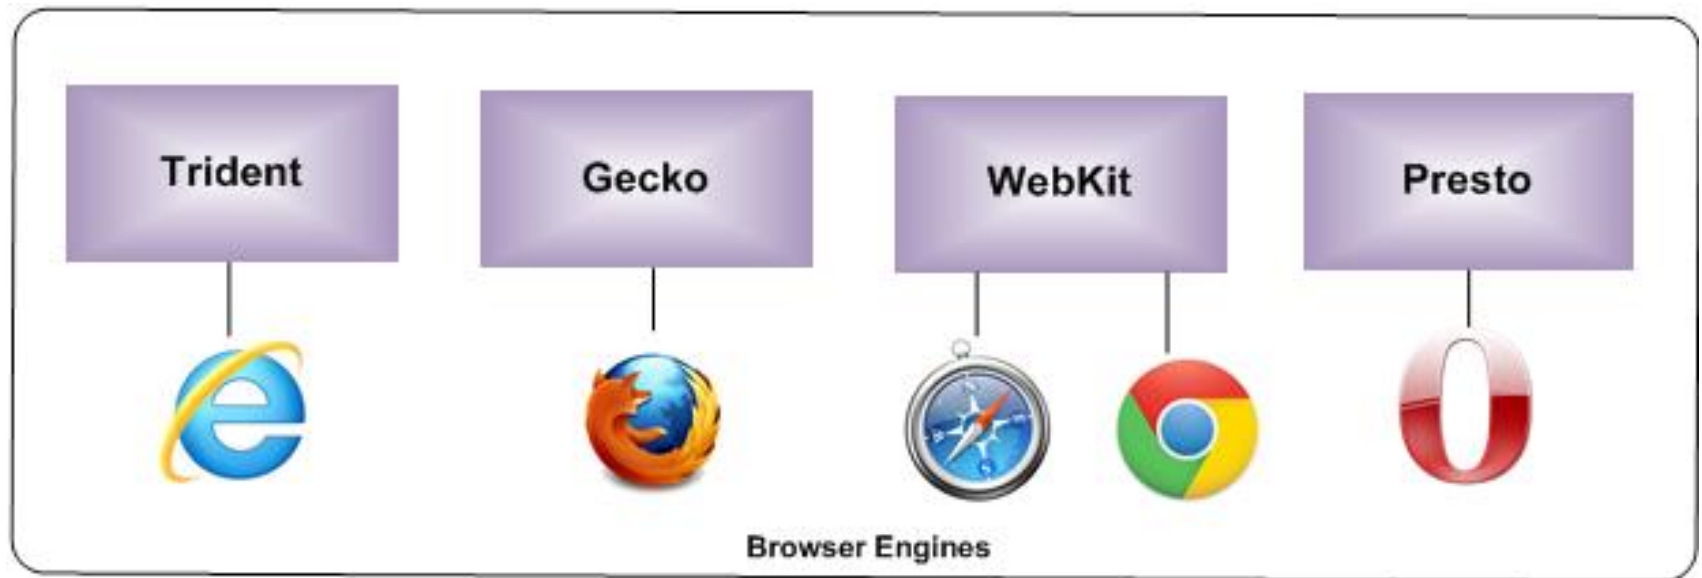

Figure 1 - Our derived conceptual architecture of Google Chrome

IE ARCHITECTURE

THE RENDERING ENGINE

Different browser use different rendering engines

THE BASIC FLOW OF RENDERING ENGINE

1. **Parsing HTML** to construct the DOM
2. **Render tree** construction
3. **Layout** of the render tree
4. **Paint** the render tree

1. HTML PARSER DOINGS

Parses input HTML tag

Fixes developer mistakes

Request to load resource

Constructs DOM tree

HTML PARSER DOINGS

```
<!DOCTYPE html>
<html>
  <body>
    <p>SangBui Website</p>
    <div>
      
    </div>
  </body>
</html>
```

```
<!DOCTYPE html>
<html>
  <body>
    <p>SangBui Website</p>
    <div>
      
    </div>
  </body>
</html>
```

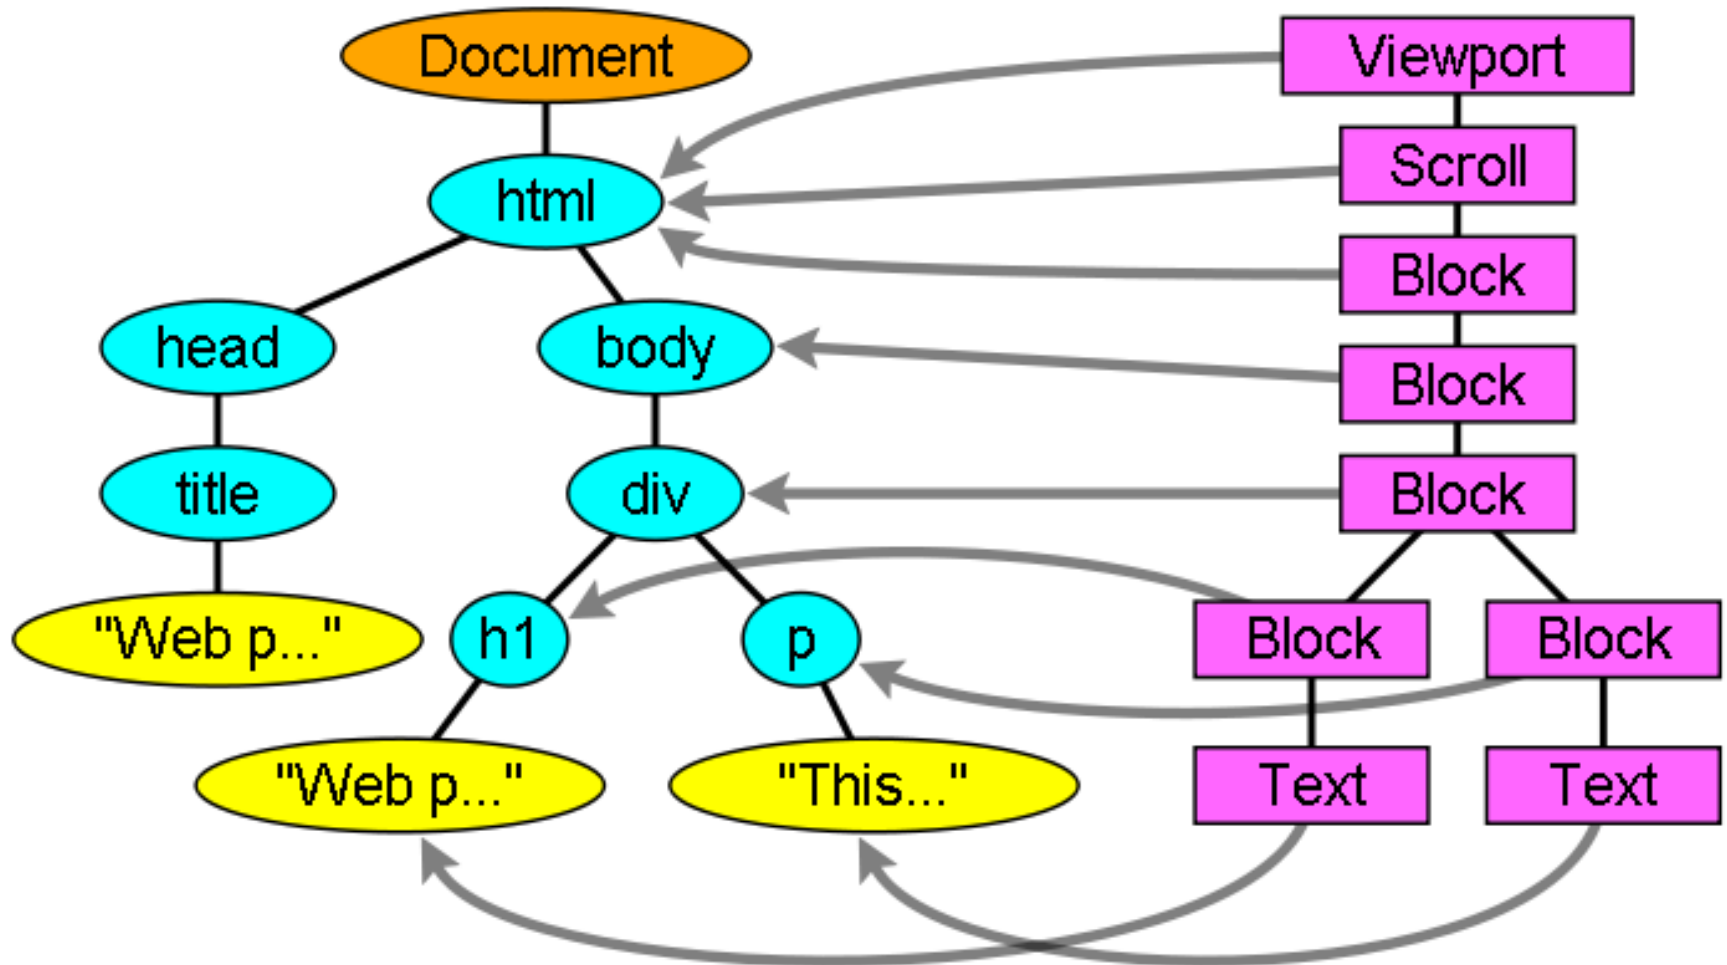

Parsing HTML to construct the DOM

2. RENDER TREE CONSTRUCTION

- **Tree of visual elements in display order.**
- **Style information, computed metrics**
- **Shadow DOM tree**

RENDER TREE CONSTRUCTION

3. LAYOUT THE RENDER TREE

What is Layout process?

- **Calculation of geometry and position**
- **Flow based model (left-to-right, top-to-bottom)**
- **Coordinate system relative to top left coordinates**

4. PAINTING

Go through the tree from the root

Global and Incremental paint

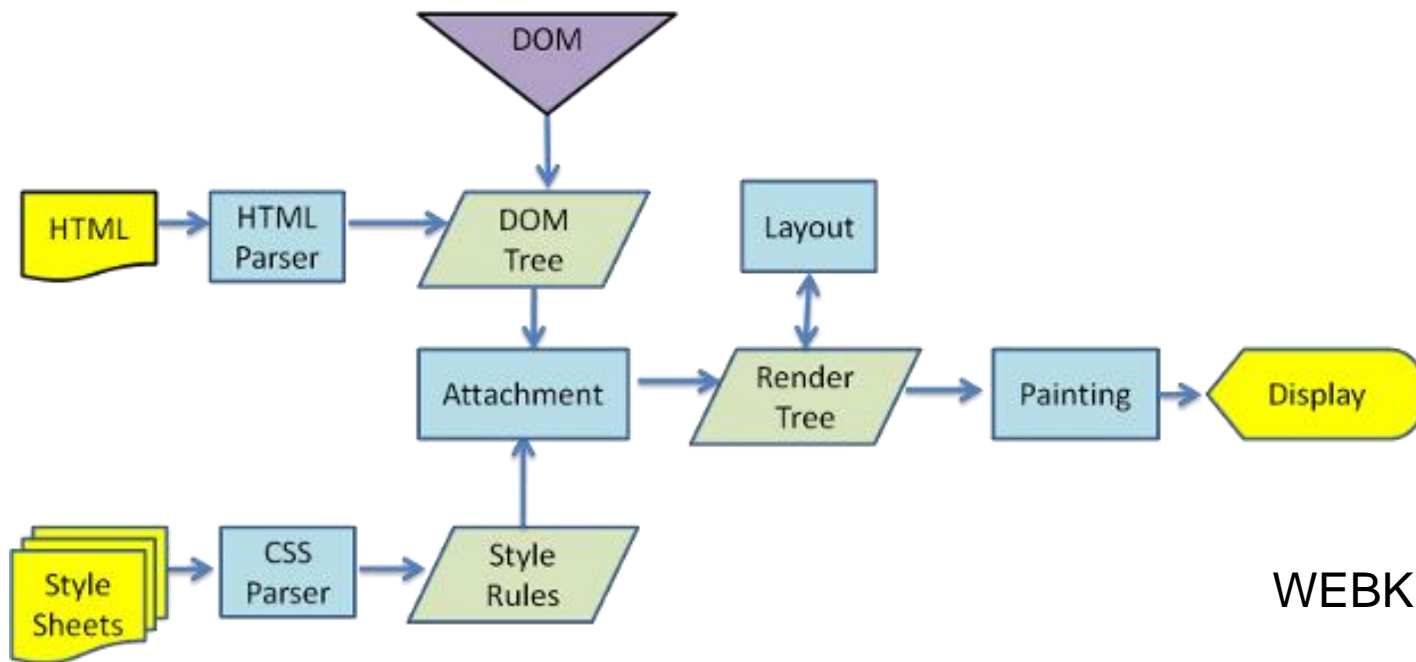

Painting order (CSS2):

- background colour**
- background image**
- border**
- ...**

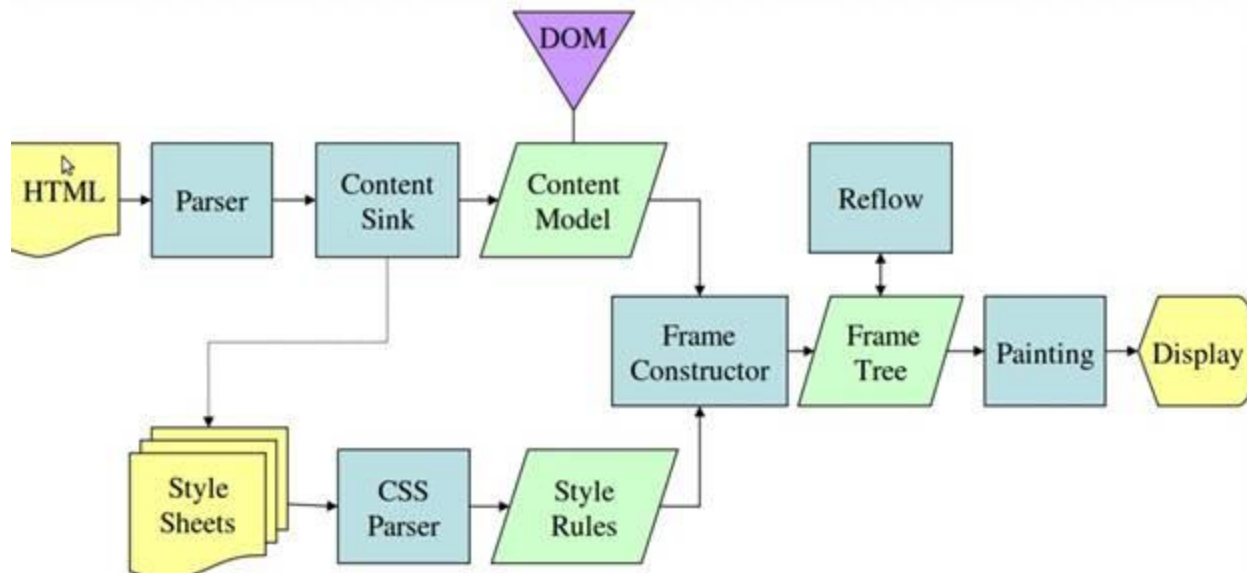

Changes style will cause restyle and repaint of the element. Changes of position will cause re-layout and repaint.

LOOK BACK THE BASIC FLOW!

WEBKIT main flow

Mozilla's Gecko

**DIFFERENT BROWSER USE
DIFFERENT RENDERING ENGINES
IN DIFFERENT WAYS**

QUIZ

[OUR FIRM](#) [INVESTOR & MEDIA RELATIONS](#) [MANAGEMENT & GOVERNANCE](#) [CAREERS](#)

WHY IT MATTERS THE BETA TRADE IS WINDING DOWN

There are still plenty of opportunities for investors to tap in emerging markets. However, the traditional beta trade—a top-down, broad-based approach to investing—will likely be much less effective. In the next phase of emerging-market growth, investors must be more discriminating.

THE TAKE-AWAY DISTINCTIONS MATTER MORE TODAY

For investors, opportunities and risks won't turn up in the obvious places, such as winners of the commodity boom or those affected by high-level economic trends. Investors will need to make clearer distinctions between countries, companies and thematic opportunities.

CROSSING BROWSER TESTING

- Cross browser testing is a process to test the web application across multiple browsers.
- Check compatibility of web in multiple browsers & make sure that web application works correctly.
- Involves testing both client side and server side behavior of application.

**TEST THE WEB
APPLICATION ACROSS
MULTIPLE BROWSERS?**

EXHAUSTIVE TESTING

Exhaustive Testing (Test everything) is Impossible.

Instead of exhaustive testing, Risk analysis and Priorities should be used to focus testing efforts.

Based on:

- Know your audience**
- Decide the platform you will support**
- How much you can test**
- Trending**

CLIENT SIDE TESTING

Client-Side testing is concerned with the execution of code on the client, typically natively within a web browser or browser plugin.

BYPASS CLIENT-SIDE

- **Disabling JavaScript in the browser**
- **Using a browser tool (ex: Firebug)**
- **Using a proxy tool like WebScarab or Tamper Data to intercept any submitted data and manipulate it before sending it on to the server.**

PRACTICE ISSUES

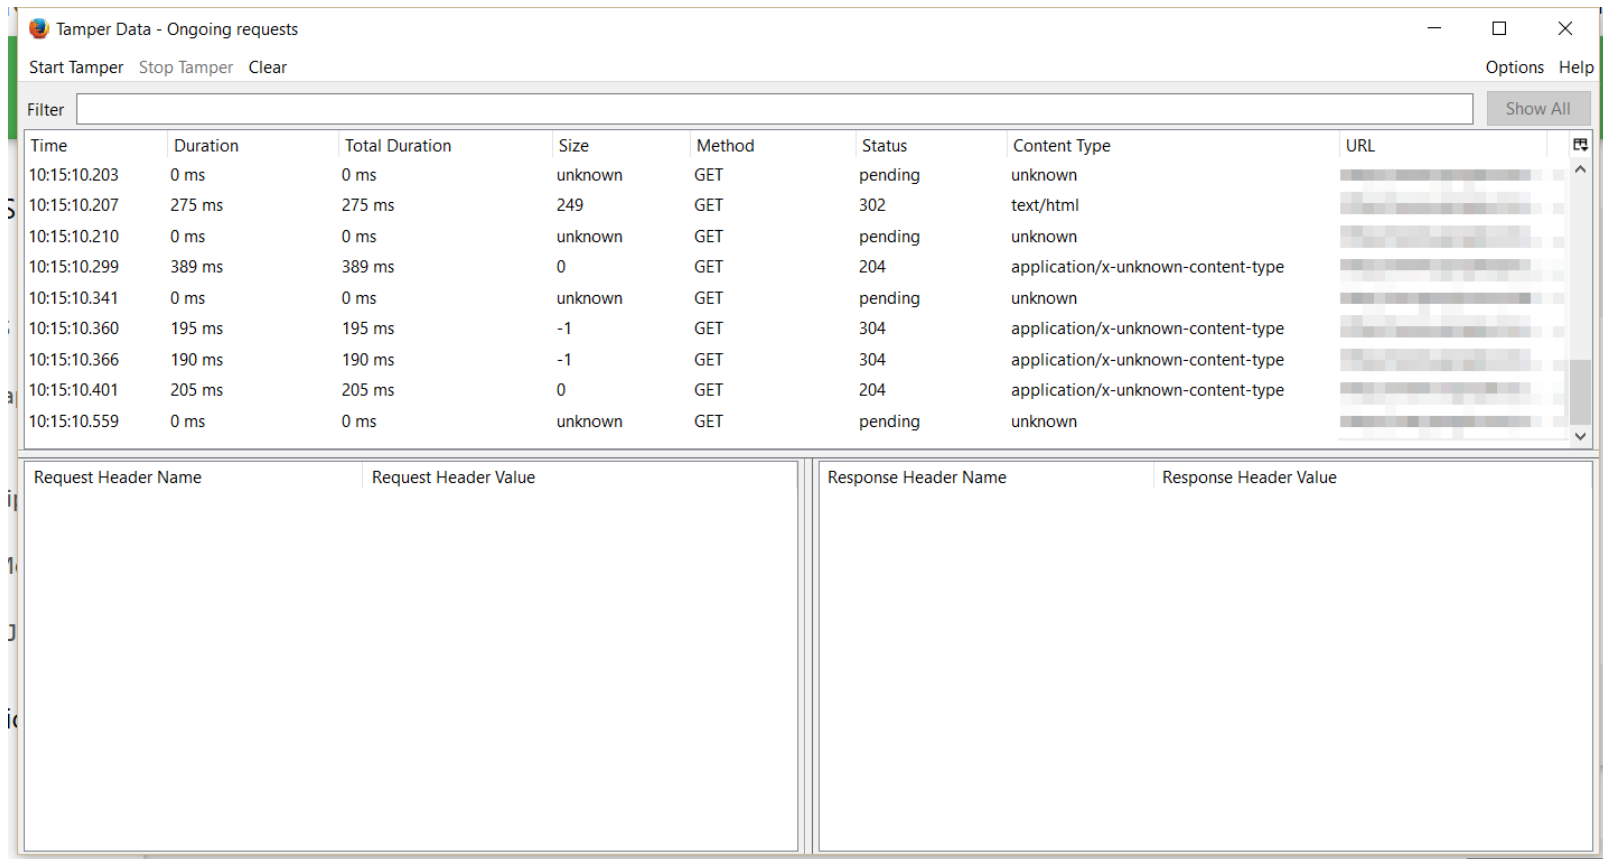

- **HTML input required Attribute**
- **HTML input maxlength Attribute**
- **Check upload file format**
- **Check locked/security content**
